

EVANESCE II Clinical Study

Now enrolling women with symptoms of
Overactive Bladder (OAB)

The purpose of this study is to evaluate the FemPulse System, a non-implanted, vaginal electrical stimulation device intended to treat women with overactive bladder (OAB).

Who Can Join?

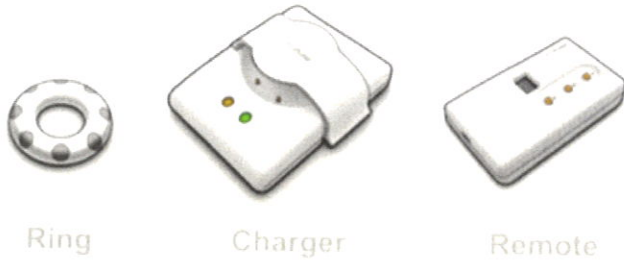

You may qualify if you:

- are 21 years or older
- experience symptoms of OAB
- are not pregnant
- can attend study visits and complete diary entries

About the FemPulse System

The FemPulse System includes a small, soft vaginal Ring that provides mild electrical stimulation to surrounding tissue.

It is controlled by a handheld Remote Control and recharged using a small Charger.
