

Looking for Participants for a Clinical Research Study

Are you a man 50 years or older who has been diagnosed with enlarged prostate?

If so, you may be eligible to participate in a clinical study evaluating minimally invasive methods for treating benign prostatic hyperplasia (BPH).

You may qualify if you:

- ◇ Have urinary symptoms
- ◇ Have been diagnosed with BPH
- ◇ Have not had prostate surgery

Participation includes receiving one of two minimally invasive treatment options for your BPH symptoms.

Participation is **voluntary** and **there is no cost** to participate in the study.

Do you find yourself...

- ⇒ Having trouble starting or maintaining urination?
- ⇒ Waking up several times a night to go to the bathroom?
- ⇒ Feeling like your bladder isn't empty — even after you just went?

You may be eligible to participate in a BPH Treatment Clinical Study (**MT-08 Study***) evaluating two FDA-approved, minimally invasive treatments for BPH — including the iTind™ procedure.

*MT-08 study is sponsored by Olympus Corporation of the Americas.

What are my next steps if I want to participate?

Ask your urologist about the study or reach out to the study site contact to see if you qualify:
